

Test day. V1

Observations on interactions on « John » V1. The goal is to define how intuitive the interaction is and help to develop the appropriate and the most user friendly product design.

User insights
Observations
Descisions
(accelo or gps)
(hangable?)

Test day. V2

Observations on interactions with «John» V2. The aim is to define the portability of the real-size assistant. The amount of movement = GPS or accelerometer. Is it sufficiently comfortable and intuitive = to be portable in the bag in everyday life. Same design as V1 but daily life product destination.
